30 Day money back guarantee and 1 year warranty

The IDWedgeKB™ is a dual purpose ID Scanner with embedded parsing software that is ideal for end users and developers on MAC, Windows, Linux computers with USB ports. It can operate as a Keyboard Auto Form filler with Any application on Any computer or be integrated into custom application using the USB Serial interface.

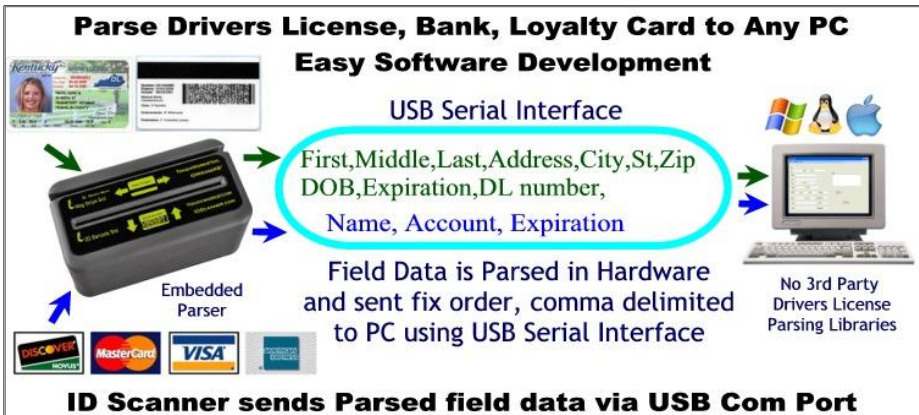

The IDWedgeKB™ is a low cost version of our IDWedgeBT™ Auto Form Filling ID Scanner designed for the desktop market. Just plug it into any computer USB port, scan a Drivers License or Credit Card and watch it fill in customer contact or payment information at the flashing cursor on the active form. It pays for itself by accurately auto-filling electronic forms twenty times faster than manually entry without data keystroke errors and does not require IT department approval or changes to existing software. See Diagram Below.

The IDWedgeKB™ can also be configured as USB Serial device for software developers to easily integrate into their applications with licensing drivers license parsing libraries. It extract drivers license and payment card data fields such as name, address, city, state, zip, date of birth, payment account and sends them in a fixed order, comma separated data string into the serial port. This makes IDWedgeKB unique in the industry. Give us a call to learn more.

APPLICATIONS

- Grocery Store – Scan Date of Birth string into Existing POS system
- Hotels – Enter Guest Information into Reservation system
- Dispensaries – Auto Fill Adobe Medical forms by Scanning ID
- Casinos – AutoFill Loyalty / Gaming card registration form
